

## Introduction for Scott Klososky

There are few people that can accurately look over the horizon and discern where technology trends are going to take us – in short predict the future. Our speaker today is one of those people. For the record, Scott Klososky (Kla-saus-kee) has several firsts...

- In the 80's he Co-Founded one of the first Soviet Union / American joint ventures that designed one of the world's first voice recognition software platforms. Before the wall came down...
- Then he created the first of its kind – CD-Rom / Book combo for Sony on the HR Haldeman Diaries.
- In the 90's he built [webcasts.com](http://webcasts.com) and delivered one the first pay-per-view events on the Web for the WWE (pro wrestling) – this company was later sold for \$115 million.
- Now he is redefining online banking & financial literacy with iThryv – a kids online banking platform

Speaking of firsts, ask him about his short stay on a 2000 pound bull during a PCRA rodeo. Terminator, I believe was the bull's name.....

This is a guy who will challenge your thinking, translate complicated concepts into layman's terms, and get your creative juices flowing.

Scott is called upon by companies like Cisco, Microsoft, Lockheed Martin, Ebay, The Hartford; and many national associations to paint a picture around how technology can be used to win.

He is to this day, still in the trenches, betting his own money on his views of where this is all going to go.

Please welcome Scott Klososky (Kla-saus-kee)
